JUSTIFICATION:

Based on indices of poor nutritional condition and population models the Fortymile caribou herd is in a decline due to reduced nutritional status caused by overgrazing of its range. To decrease the potential for additional long-term impacts to the habitat, this harvest strategy quickly reduces the herd to a size that will allow the nutritional condition of individual animals to improve.

The Fortymile Caribou Herd Harvest Plan guides harvest of the herd. The annual harvest quota is allocated seasonally: 75% to the fall hunt and 25% to the winter hunt. The winter harvest quota is further subdivided into zones within the RC867 registration hunt area, each with its own quota. The winter 2020 combined quota for Zones 1 through 4 is 5,000 caribou. Fortymile caribou are currently accessible in Zones 1, 2 and 4, and we expect adequate opportunity for hunters to harvest caribou in the RC867 hunt area.
